2021 - 2026

PROJECTS

SMART RECYCLING PROJECT

The project aims to improve recycling processes using artificial intelligence and object detection systems.

In this project, my teammate and I will encourage people to use recycling bins more frequently through a mobile application and game

DISABLED LIVING SYSTEM

We became finalists in this project and entered the top 30 teams in Turkey. The aim of this project is to provide communication between hearing impaired individuals and visually impaired individuals. I was involved in the web part and data training part of this project.
